## What we do

Frasier Digital builds AI and data systems for public-sector programs and delivers them as a fixed-price subcontractor or teaming partner on your paper. Our engineers earned their experience inside Fortune 100 and 500 delivery organizations, including current enterprise AI implementation work through PwC, production generative-AI features on Mailchimp's platform serving millions of users, and enterprise forecasting platforms at EOG Resources. We bring that caliber at small-business speed and rates.

**AI and LLM applications.** Retrieval-augmented assistants, document intelligence, agent orchestration, and structured-output pipelines on Anthropic Claude and OpenAI. Schema-validated outputs, golden-set evaluation before release, human-in-the-loop control, drift monitoring in production. Aligned to the NIST AI Risk Management Framework.

**Data engineering and analytics.** Pipelines, warehouses, and governed data models on SQL Server, PostgreSQL, and Python; Power BI and web-native dashboards; data quality controls and lineage delivered as standard artifacts.

**Application modernization.** React/Next.js, Node, Python, .NET/C#, API design; migration of legacy systems to Azure Government and AWS GovCloud with FedRAMP-inherited controls; Section 508 / WCAG 2.1 AA conformance.

**Delivery discipline.** CI/CD from day one, automated test coverage as an acceptance criterion, SAST/DAST/SCA in the pipeline, and milestone-based firm-fixed-price reporting.

## Why primes team with us

- **Subcontracting-plan credit.** Awards to Frasier Digital count toward SDB and small-business subcontracting goals.
- **A slice you can hand off.** We take a defined workstream, typically an AI feature, a dashboard, a data pipeline, or a modernization sprint, and deliver it fixed-price with our own team, under your PM.
- **Compliance-ready today.** We can sign C-SCRM questionnaires, the CISA Secure Software Development Attestation, FAR 52.204-21 safeguarding, and Section 889 representations without exception.
- **Right-sized.** Senior engineers only; standing subcontractor bench for surge; Eastern-hours coverage standard.

## Representative experience

- **Region 4 Education Service Center (Houston).** Built a certification training platform from scratch, July 2024 to October 2025, serving school districts across Harris County: SCORM Cloud integration, authentication, course ingestion, completion tracking, and reporting for thousands of users.

- **Louisiana Department of Education.** Senior engineering on the statewide education data platform: C++ computational models, .NET/C#/SQL Server services, and T-SQL pipelines, 2024 to present.
- **Mailchimp (via Tensure), 2024.** Production generative-AI features shipped to millions of users.
- **PwC, 2026.** End-to-end AI implementations for Fortune 100 and 500 clients: architecture, delivery, CI/CD, and maintenance.
- **EOG Resources.** Company-wide production monitoring and forecasting platform integrating heterogeneous operational data.
- **Deloitte for USDA.** Crop-inspection scheduling application, mobile and desktop.
- **Federal proposal prototypes, 2026.** Working evaluation builds for CDC (VAERS modernization) and Selective Service (readiness simulation), each delivered within a proposal window.

## How to engage

---

Non-exclusive teaming agreement on your template, or a task-scoped subcontract. We respond to a scope in five business days with a fixed price and a named team. Past-performance questionnaires are welcome; our references will take the call.
