PROFESSIONAL SUMMARY

Full-stack software engineer building production web applications with Next.js 15, TypeScript, React, and Supabase, focused on secure authentication, role-based access control, and scalable, maintainable architecture. Moved into software from a decade in manufacturing and process optimization, bringing data-driven problem solving and quality ownership to engineering teams.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C#, SQL, HTML, CSS
Frontend: Next.js 15 (App Router), React, server-side rendering, reusable component architecture
Backend & Data: Node.js, REST APIs, Supabase Auth, PostgreSQL, Row Level Security (RLS), SQL, SSMS, .NET fundamentals
Security & Auth: OAuth 2.0 (Google, GitHub), session and middleware handling, role-based access control (RBAC), multi-environment permissions
Tools & Practices: Git, GitHub, Agile, SDLC, code review, QA and testing, debugging, technical documentation
Additional: Process optimization, Lean manufacturing, root cause analysis, SOP development, data analysis

PROFESSIONAL EXPERIENCE

Software Engineer

Irongrove LLC, Houston, TX | 10/2025 - Present

- Architected a three-tier organizational hierarchy (Organization, Environment, Zone) using Next.js 15 and TypeScript, implementing role-based access control (RBAC) with granular permissions across Production, Staging, and Development environments.
- Engineered a full-stack authentication system with Supabase Auth, including email/password login, OAuth (Google, GitHub), password reset flows, custom middleware, and Row Level Security (RLS) policies for data protection.
- Developed 11+ server-side rendered pages with the Next.js 15 App Router using nested dynamic routes and breadcrumb navigation.
- Built 13+ reusable React components, including environment-aware UI elements, to standardize the front end and reduce duplicate code.

Process Optimization Operator

Suniva Solar Cell Manufacturer, Norcross, GA | 04/2024 - 10/2025

- Operated high-tech solar cell manufacturing machinery, ensuring optimal performance, high yield, and quality control in line with industry standards.
- Created Standard Operating Procedures (SOPs) for machinery, establishing baseline guidelines for production.
- Mentored new operators on machine operations, SOPs, and safety procedures, and championed safety protocols to maintain a hazard-free work environment.

Operations and Process Optimization Specialist

General Dynamics Land Systems, Tallahassee, FL | 2014 - 2016; 03/2017 - 03/2024

- Boosted manufacturing efficiency 25% through data-driven process optimization and lean manufacturing techniques, cutting production time and cost.
- Completed 15+ military contracts for Abrams and Stryker tank repairs, holding to strict quality standards.
- Cut lead times 10% and logistics costs 15% through inventory management improvements and strategic vendor partnerships.
- Attained IPC solder certification and reduced defect rates by 25%, supporting quality and compliance in complex engineering environments.

EDUCATION

Bachelor of Science, Sports Management (Minor: Management)

Pensacola Christian College, Pensacola, FL | 2012

CERTIFICATIONS & TRAINING

Web Development Boot Camp | IPC Solder Certification (General Dynamics)
