

STACY HUNT

Senior Full Stack Software Engineer

(972) 971-1646 · Baton Rouge, LA · stacy.samuels10@gmail.com

SUMMARY

Senior Full Stack Software Engineer with 5+ years of combined engineering and technical mentorship experience and shipping production web applications across consulting, environmental software, and government data systems. Strong TypeScript, React, and Node.js foundation paired with deep C#/.NET and SQL Server experience. Currently delivering AI-integrated full-stack applications - including agentic systems, RAG pipelines, and LLM-powered client tooling - for Fortune 500 engagements at PwC. Known for end-to-end feature ownership and fast execution in ambiguous environments.

EXPERIENCE

Senior Full Stack Engineer *June 2025 – Present*

PricewaterhouseCoopers (PwC) · Remote

- Architect and deliver end-to-end AI-integrated proof-of-concept applications for clients in varied industries - owning features from ambiguous problem statement through working demo and iteration.
- Build agentic visualization tools that integrate LLMs with React-based front ends, enabling non-technical business users to drive complex analytical workflows.
- Develop full-stack analysis tools for mortgage loan providers, pairing interactive front-end dashboards with backend data processing pipelines and SQL-backed data models.
- Deliver CPG engagements spanning marketing analytics, innovation pipelines, and data analysis — translating client business needs into scalable software solutions end to end.
- Reduced first-iteration POC delivery time from weeks to days (roughly 80% faster turnaround) by building reusable full-stack scaffolding, templated agentic patterns, and disciplined prompt engineering practices adopted across the team.
- Partner daily with designers, product managers, and client stakeholders to translate business requirements into production-quality software - integrating RAG pipelines, vector databases, and multi-agent frameworks (LangChain, LangGraph) where appropriate.

Lead Full Stack Software Developer *December 2023 – June 2025*

Insight Global LLC (contracted with State of Louisiana) · Remote

- Led Git workflow, documentation, and CI/CD pipeline improvements, doubling website release cadence from bimonthly to monthly.
- Used Razor syntax in ASP.NET Core to troubleshoot front-end issues and improve API data integrity, decreasing user error data corrections by 30%.
- Leveraged AI tooling for SQL performance tuning and development speed, reducing query time by 10% and accelerating sprint delivery by over 25%.
- Planned and ran agile sprints, led team meetings, and delegated work to align execution with business goals.
- Championed prompt engineering and AI-assisted development across the team, raising collaborative problem-solving speed on complex code and advocating internally for broader tooling adoption.
- Communicated project status, risks, and resource needs to stakeholders while improving state and federal reporting processes for compliance and data accuracy.

Full Stack Software Developer *November 2022 – December 2023*

EarthSoft Inc. · Remote

- Implemented automated tests for REST API endpoints, improving reliability and performance while reducing manual testing effort.
- Optimized scheduler application to recompute project timelines and resource allocation on change, improving project management efficiency.

- Built and enhanced reporting modules that visualized pollution variations, helping clients make data-driven environmental decisions and meet regulatory requirements.
- Participated in Azure DevOps–based agile delivery, increasing work completed per release by at least 10%.
- Streamlined onboarding by writing new developer documentation, cutting time-to-productivity for new developers by 50%.

Earth and Space Science Teacher & Robotics Coach *August 2017 – May 2022*

Plano West Senior High School · Plano, TX

- Coached and mentored students in Java programming, robot design, and construction — directly comparable to mentoring mid- and junior-level engineers through pairing and code review.
- Executed agile methodologies within the robotics team to simulate real workplace dynamics, improving sprint cadence and delivery quality.
- Delivered technology-integration professional development for 100+ colleagues, translating technical concepts for non-technical audiences.
- Authored a comprehensive robot-build manual now distributed nationwide to support new coaches.
- Used data analysis and a test-driven curriculum approach to raise student passing rates by 80%.

Physics, IPC, and Aquatic Science Teacher *January 2015 – June 2017*

Wakeland HS (Frisco, TX) and Kimball HS (Dallas, TX) · TX

- Designed and delivered STEM curriculum with an emphasis on real-world applications, hands-on lab work, and data-driven instruction. Details available on LinkedIn or on request.

TECHNICAL SKILLS

Languages TypeScript, JavaScript, C#, Python, SQL, Java, HTML5, CSS

Front-End React, Redux, Next.js, Angular, Tailwind CSS

Back-End Node.js, Express, .NET, ASP.NET Core, REST APIs

Data PostgreSQL, SQL Server, SSMS, SSRS

AI/ML LLM integration (OpenAI, Anthropic), RAG pipelines, vector databases, agentic frameworks (LangChain, LangGraph), prompt engineering, AI-assisted development (Claude code, Cursor)

DevOps & Tools Git, GitHub Actions, CI/CD, Azure DevOps, Jira, Visual Studio, VS Code

Practices Agile/Scrum, code review, mentorship, cross-functional collaboration, technical documentation

EDUCATION

Bachelor of Science, Marine Biology Texas A&M University at Galveston · 2010 – 2014
