

Zachary Antosko

Software Engineer

Houston, TX | (361) 425-4862

[LinkedIn](#) | zachary.antosko@gmail.com

Experienced Software Engineer with a proven track record in developing and maintaining scalable full-stack systems. Proficient in JavaScript along with other technologies such as Node.js, Express, TypeScript and React.

PROFESSIONAL WORK EXPERIENCE

ID Plans | Software Engineer | Remote

February 2024 - Present

- Developed migration framework that reduced database operational costs by 40% and improved query performance for complex filtering operations, featuring automated ETL pipelines for data extraction and transformation, comprehensive validation engine ensuring data integrity across over 1.15 million migrated records, and code generation tools that converted DynamoDB service methods to type-safe MySQL/TypeORM implementations with zero production downtime.
- Spearheaded migration from legacy Node.js APIs to NestJS, refactoring more than 50 service methods and counting with dependency injection and TypeScript type safety for property management, lease tracking, and CRM integration systems serving millions of records. Implemented real-time DynamoDB stream processing to maintain data consistency across distributed systems, reducing API development time, and improving developer experience by establishing reusable modular architecture.

Honeywell | Software Engineer II | Houston TX

October 2022 - February 2024

- Led team of 4 using Agile methodology to redesign, implement, and maintain new version of the team's initial web platform based on lessons learned. Here I played a key role in API design, building React components, and collaborating closely with cross-functional teams to integrate frontend and backend elements seamlessly. Within a 3 month deadline the team was able to successfully complete a suitable pilot for customer demos.
- Secured a position in a micro-innovation team after coordinating with frontend and backend teams to address identified pinch points. Successfully designed and implemented a new backend system, contributing to a 15% reduction in error resolution time by enabling hardware to propagate errors into the database. Collaborated with the AI team in migration of phase 1 to phase 2 seeding models and optimizing seeding for larger datasets, resulting in a 25% improvement in data processing speed.

Honeywell | Software Engineer I | Houston TX

September 2021 - October 2022

- Architected and maintained backend server using Nest.js and TypeORM for rapid prototyping of HTTP server and query validations. NoSQL and SQL databases for handling different data used by hardware and backend teams. Implemented message streaming consumer using RabbitMQ and WebSocket connection allowing hardware and backend emulator to broadcast upwards 10,000 messages within less than 2 seconds to website dashboard.
- Utilized technologies such as: TypeScript, React, RTK and RTK Query for state and REST API call management and Three.js interactive 3D visualizations of hardware actions. Optimized rendering of 3D models on dashboard by implementing instance meshes allowing for upwards of 20,000 models to be shown using a single draw call, leading to significant increases in user GPU performance.

EDUCATION

DigitalCrafts | Certificate in Software Engineering | Houston, TX

Received June 2021

- A software engineering training program that covers full-stack development skills and teaches modern best-practices for transition into industry.

Texas A&M Kingsville | B.S. in Chemical Engineering | Kingsville, TX

Received December 2018

LANGUAGES AND TECHNOLOGIES

- **Proficient:** Node.js, JavaScript, Express, TypeScript, NestJS, React, Redux, Python, PostgreSQL, MySQL, MongoDB, Database ORMs (Sequelize, TypeORM), HTML5, CSS3/Sass, RabbitMQ, JWT, AWS (DynamoDB, RDS, Lambda, S3), Docker
- **Exposure:** Redis, React Native, Tailwind, Azure, InfluxDB
