

Annex — Key Personnel Resumes

Joseph Frasier — Project Manager (Key Personnel)

Founder and Managing Member, Frasier Digital, LLC · Tomball, TX · (850) 356-2382 · joseph@frasierdigital.com

Technologies in use on this contract — where used

Technology	Direct use
React / TypeScript / Node	WeWork (internal and customer-facing apps), Ecotone (React, Node/Express), Region 4 platform front end and services
Authentication and role-based access backends	Region 4: designed and built the authentication backend and role-based access for thousands of users
REST API design and integration	Region 4 (SCORM Cloud API integration, ingestion and validation services), EOG, Deloitte
CI/CD, cloud operations	PwC AI implementations (architecture through CI/CD and maintenance), Region 4
Government delivery	Louisiana Department of Education (statewide data models, current); USDA-facing application (Deloitte)

Proposed role

Project Manager: single point of contact for the Contracting Officer, Contract Specialist, and HEC Technical POC; owner of every deliverable; chair of the biweekly development meetings; approver of all work-unit submissions and Task 5 requests; reviewer of every pull request.

Experience

Frasier Digital, LLC — Founder, Program Lead and Architect · 2024 – present

- Program manager and hands-on developer for the Region 4 Education Service Center (Houston, TX) certification and training platform, July 2024 – October 2025: ground-up design, build, and operation of a role-based web platform serving thousands of users across Harris County school districts — authentication backend and role-based access control, SCORM Cloud API integration, course ingestion and validation, completion tracking, reporting. No inherited codebase. Managed scope, schedule, and a small named team; accountable to the customer's technical lead throughout.
- Author of the company's federal proposal and delivery practice: work-unit definitions, pull-request review standards, and capacity-honest staffing.

PwC — AI Implementation Engineer (consultant) · 2026 – present

- End-to-end AI implementations for Fortune 100–500 clients: solution architecture, full-stack build, CI/CD, and maintenance on enterprise platforms valued in the millions.

Louisiana Department of Education (via Insight Global) — Senior Software Engineer · July 2024 – present

- Maintains and extends the C++ computational models at the core of Louisiana's statewide education data processing, plus the .NET/C#/SQL Server platform and T-SQL pipelines around them; government data-handling discipline in daily practice.

Mailchimp (via Tensure) — Software Engineer · January – June 2024

- Production generative-AI features on a platform serving millions of users.

Perdoceo Education Corp (via DigitalCrafts) — Lead Instructor / Senior Software Developer · January 2021 – January 2024

- Canvas LMS engineering across the Perdoceo enterprise; led instruction for cohorts of software-engineering students — several members of the Frasier Digital bench trained under this program.

Deloitte — Software Engineer · April 2020 – January 2021

- USDA-facing crop-inspection scheduling application (mobile and desktop).

WeWork — Software Engineer · April 2019 – April 2020

- React/TypeScript development on internal and customer-facing applications.

EOG Resources — Software Engineer · September 2018 – April 2020

- Company-wide water/gas/oil production monitoring and forecasting platform: front end, Mapbox scenario visualization, immutable backend pattern; worked with the C++ production models feeding the platform; onboarded 50+ users.

Ecotone — Front-End Developer · January 2015 – September 2018

- Front-end JavaScript/React and Node/Express development.

Education

B.S., Business Management (minor, Business Technology), Pensacola Christian College, 2013 — including three years of computer-science major coursework. The Iron Yard software engineering immersive, 2017.

Certifications and special qualifications

No professional certifications are held; project-management qualification rests on eleven-plus years of delivery, including program management of a ground-up platform for a public-sector customer. U.S. citizen.

Scott A. Carpenter — System Engineer / Architect (Key Personnel)

Houston, TX · (713) 259-9775 · carpenter.scott22@gmail.com · linkedin.com/in/scott-carpenter22

Technologies in use on this contract — where used

Technology	Direct use
AWS services and infrastructure-as-code	Amazon Web Services (2022–24): automated infrastructure-as-code for a usage-data application, reducing total deployment time by 96 %; redesigned backend APIs and supporting configurations to recover stuck data planes
Distributed backend services	Amazon (2024–25): backend software for the Amazon Seller platform across distributed systems; weekly on-call rotations
Java, Python	Production backend development
Secure coding and vulnerability documentation	AWS: authored technical documentation evaluating security vulnerabilities of new logical endpoints in software changes
DevOps, CI/CD, pipeline management, containers	AWS apprenticeship and Amazon SDE work
Team leadership in an Agile process	Led Agile standups for a team of eight engineers (Amazon)

Proposed role

System Engineer / Architect: owns the CWBI-side work — the sidecar container set (proxy, OPA, cache) in the CWMS-Data task definition, CDK change requests through Platform1, hardened base images and their update path, health endpoints for CWBI uptime monitoring, and the STIG self-assessment maintained in the repository; leads Task 3a/3b stand-up and the Task 4 load-test topology.

Experience

Amazon — Software Development Engineer · October 2024 – July 2025

- Launched the Amazon Seller platform on iOS and Android in Ireland for more than 1,000 existing businesses with more than 100 million products in the European Union.
- Led a team of eight engineers in Agile standups; investigated customer-raised software issues during weekly on-call rotations.
- Implemented backend software to maintain and improve the Seller experience across distributed systems; coordinated with engineering, product, and support teams on launch readiness and post-deployment platform integrity.

Amazon Web Services — Software Development Apprentice · October 2022 – October 2024

- Automated infrastructure as code for an amended-usage-data application, reducing total deployment times by 96 %.

- Redesigned backend APIs and reconfigured supporting systems to recover critical customer usage data from stuck data planes.
- Authored technical documentation evaluating security vulnerabilities of new logical endpoints introduced by software changes.

The Molo Group — Web Development Consultant · August – October 2022

- Optimized and developed customized front-end codebases for more than a dozen small and medium businesses; responsive interfaces in HTML, CSS, and JavaScript.

Tomball ISD — Substitute Teacher · 2021 · **Sam Houston State University — Teaching Assistant, Cellular Biology** · 2020

- Classroom instruction; laboratory safety compliance; mentoring in technical writing, research methods, and data interpretation.

United States Army — Infantryman / Special Forces Candidate · July 2014 – June 2018

- Training in small-unit tactics, mission planning, and emergency medicine; managed more than 100 personnel for daily accountability, maintenance duties, and security-outpost scheduling.

Education

B.S., Biomedical Science — Sam Houston State University.

Certifications and special qualifications

Department of Labor Software Development Certificate; Codeup Web Development Certificate. U.S. Army veteran. U.S. citizen. Available full time at award.

Zachary Antosko — Senior Forms Developer (React/TypeScript) and Senior Oracle DBA (Key Personnel, dual role per Q&A 9)

Houston, TX · (361) 425-4862 · zachary.antosko@gmail.com

Technologies in use on this contract — where used

Technology	Direct use
React, Redux (RTK, RTK Query), TypeScript	Honeywell (2021–24): built React components and REST-call/state management for an operations web platform; ID Plans (2024–present): TypeScript throughout
Node / TypeScript REST backends (NestJS, Express)	ID Plans: migrated 50+ service methods from legacy Node APIs to NestJS with dependency injection and type safety; Honeywell: architected the NestJS/TypeORM backend with query validation
Relational data, ORMs, migrations	ID Plans: DynamoDB → MySQL/TypeORM migration framework with automated ETL and a validation engine across 1.15 million records, zero production downtime; PostgreSQL, MySQL, Sequelize/TypeORM
Authentication and authorization	JWT-based auth in Node/NestJS services
AWS (RDS, DynamoDB, Lambda, S3), Docker	Daily use at ID Plans and Honeywell
Real-time and streaming	RabbitMQ consumer + WebSocket broadcast of 10,000 messages in under two seconds to a live dashboard (Honeywell)

Proposed role

Dual key-personnel role under the Government's Q&A answer 9. **Senior Forms Developer** (React/TypeScript web forms): owns the `cwms-access-management` React application and the management API — the Users, Roles, and Policy tab increments in Technical Exhibit 1, the mask builder with catalog preview, bulk operations, validation, Storybook stories, and component tests; pairs with the Senior Java Developer on the CDA endpoints the UI calls. **Senior Oracle DBA**: owns the bounded schema increments in this design — reinstating the `at_sec_ts_group_embargo` table, extending the mask views, keeping the integration-test database images current — delivered as small, HEC-reviewed PL/SQL changes validated by the integration suite against the `database-ready` Oracle image, applying the same migration-and-validation discipline demonstrated at 1.15 M-record production scale.

Experience

ID Plans — Software Engineer (remote) · February 2024 – present

- Developed a database-migration framework that reduced database operational cost by 40 % and improved query performance for complex filtering: automated ETL pipelines, a validation engine ensuring integrity across more than 1.15 million migrated records, and code-generation tools converting DynamoDB service methods to type-safe MySQL/TypeORM implementations with zero production downtime.
- Led the migration from legacy Node.js APIs to NestJS — more than 50 service methods with dependency injection and TypeScript type safety — for property-management, lease-

tracking, and CRM integration systems serving millions of records; implemented real-time DynamoDB stream processing for cross-system consistency; established a reusable modular architecture that reduced API development time.

Honeywell — Software Engineer II · Houston, TX · October 2022 – February 2024

- Led a team of four in an Agile process to redesign, implement, and maintain a new version of the team's web platform; owned API design and React component construction; delivered a customer-demo pilot inside a three-month deadline.
- Selected for a micro-innovation team; designed and implemented a backend that propagated hardware errors into the database, cutting error-resolution time 15 %; collaborated with the AI team on model-seeding migration and optimization for larger data sets (25 % faster processing).

Honeywell — Software Engineer I · Houston, TX · September 2021 – October 2022

- Architected and maintained the NestJS/TypeORM backend for rapid prototyping of HTTP services with query validation across SQL and NoSQL stores; implemented the RabbitMQ/WebSocket streaming consumer feeding the operations dashboard.
- Built the React front end with TypeScript, Redux Toolkit, and RTK Query; implemented Three.js 3D visualization with instanced rendering of 20,000+ models in a single draw call.

Education

B.S., Chemical Engineering — Texas A&M University–Kingsville, December 2018.
DigitalCrafts Certificate in Software Engineering, Houston, June 2021.

Certifications and special qualifications

Proficient: Node.js, TypeScript, NestJS, Express, React, Redux, Python, PostgreSQL, MySQL, MongoDB, TypeORM/Sequelize, RabbitMQ, JWT, AWS, Docker. Exposure: Redis, Tailwind, Azure. U.S. citizen.

Randy Chong — Senior Java Developer (Key Personnel; "Senior APEX or Java Developer")

Dallas, TX · (321) 417-6756 · mr.randy.chong@gmail.com · linkedin.com/in/r-chong

Technologies in use on this contract — where used

Technology	Direct use
Java, Spring, Spring Boot REST services	JPMorgan Chase (2022–present): enterprise digital-forms and letters platform, 100+ forms
AWS in production — ECS, EKS, RDS, S3, CloudWatch	Updates and deploys infrastructure and application code to production; multi-region failover exercises with evidence collection
Relational databases from Java	Amazon RDS-backed services
Angular, with React	Sole developer of a production multi-form completion and signing feature (Angular); React exposure
CI/CD, code review, production support	Daily practice: deployment pipelines, health checks, troubleshooting, dependency upgrades
Software testing	Software Test Engineer (2022): test cases from acceptance criteria in an Agile release process

Proposed role

Senior Java Developer: owns the CWMS-Data-API side — rebasing and landing pull request #1461 in review-ladder-sized pieces, the new `auth/` endpoints for security time-series groups, header verification, integration tests in the `DataApiTestIT` pattern, and the Java portion of Task 5 maintenance; supports the load-test harness and the CDA health endpoint for CWBI.

Experience

JPMorgan Chase — Software Engineer II · Plano, TX · October 2022 – present

- Develops and supports enterprise applications in Customer and Consumer Banking for digital forms and letters onboarding and archival, an ecosystem of more than 100 forms.
- Sole designer and developer of a production feature enabling customers to complete and sign multiple forms in one session.
- Designed and implemented a self-service form-onboarding and maintenance system, adapted from an existing letters solution, that lets product teams onboard and update forms without developer involvement — configuration over code.
- Updates and deploys AWS infrastructure (S3, ECS, EKS, RDS, CloudWatch) and performs application and dependency version upgrades; deploys application and infrastructure changes to production; provides production support through health checks, troubleshooting, and issue investigation.
- Participates in firm-wide resiliency exercises: multi-region AWS failover testing with evidence collection validating application recovery.

GMR Protection Resources — Software Test Engineer · Dallas, TX · January – July 2022

- Created and executed daily test cases covering user-acceptance criteria and validating features before production release in an Agile environment; defined testing requirements and coverage with developers and stakeholders.

Education

B.S., Marketing — Pensacola Christian College, 2016. DigitalCrafts Web Development Bootcamp, Houston, 2021.

Certifications and special qualifications

AWS Certified Cloud Practitioner. Practices: Agile/Scrum, code review, production support, CI/CD. U.S. citizen. Committed to this contract on a fractional schedule sized in Volume III.
