

Accessibility Conformance Report (ACR) — Draft

Report information

Name of product	Modernized VAERS Reporting Application (proposed) — evaluated build: working prototype at https://vaers-demo.frasierdigital.com
Report date	[render date]
Product description	Mobile-friendly, desktop-compatible web application for public and healthcare-provider VAERS report submission: branching submission form, plain-language public path, intelligent completion assistance, satisfaction surveys, low-code administrative interface, medical-record upload (Phase 1)
Vendor	Frasier Digital, LLC · joseph@frasierdigital.com · (850) 356-2382
Evaluation methods used	Automated WCAG 2.1 A/AA testing (axe-core) across 12 application states — 0 violations; manual keyboard-only operation of all flows; focus-management review (modals focus-trapped, skip navigation); screen-reader spot checks; reduced-motion preference honored; color-contrast verification of all tokens including state variants; 44px minimum touch targets
Applicable standards	WCAG 2.1 Level A and AA; Revised Section 508 (36 CFR Part 1194); HHS ICT accessibility requirements

Summary of conformance

Standard / level	Conformance level	Remarks
WCAG 2.1 Level A	Supports	All Level A success criteria pass automated + manual evaluation across every prototype state (landing, both form paths, branching states, assistance panel, narrative prefill, surveys, admin, evaluator guide)
WCAG 2.1 Level AA	Supports	0 violations in automated audits; contrast, reflow, text spacing, orientation, and focus-visible verified manually
Section 508 functional performance criteria	Supports	Full keyboard operability without vision or fine-motor precision; no audio-only or timing-dependent content; assistance features optional with complete non-AI path
Section 508 support documentation (602)	Supports	User documentation delivered in accessible formats (Task 1.12/3.8); ACR maintained through delivery

Success criteria detail (condensed for quote; full criterion-by-criterion table in rendered ACR)

Criteria group	Status	Evidence / remarks
Text alternatives; info & relationships; semantic structure (1.1.1, 1.3.x)	Supports	Semantic HTML + ARIA landmarks; form fields programmatically labeled; branching changes announced via live regions ("N questions removed")

Criteria group	Status	Evidence / remarks
Distinguishable content: contrast, resize, reflow, non-text contrast (1.4.x)	Supports	Token system verified $\geq 4.5:1$ text / $\geq 3:1$ UI components incl. success/error states; 400% zoom reflow without loss; no horizontal scroll
Keyboard accessible; no traps; visible focus (2.1.x, 2.4.7)	Supports	Every flow completable keyboard-only; modals (surveys) focus-trapped with escape; visible focus states on all interactive elements
Enough time; seizures; motion (2.2.x, 2.3.x)	Supports	No time limits on completion (save/resume provided); no flashing; all animation gated on prefers-reduced-motion
Navigable: titles, order, headings, skip, multiple ways (2.4.x)	Supports	Logical focus order across branching steps; descriptive headings; consistent navigation
Input assistance: labels, error identification/suggestion/prevention (3.3.x)	Supports	Inline validation with text error identification and correction suggestions; review step before submission (error prevention for legal/data commitments)
Readable & predictable (3.1.x, 3.2.x)	Supports	Plain-language public path (1.6.1); language of page set; no context changes on focus/input
Compatible: parsing, name/role/value, status messages (4.1.x)	Supports	Valid markup; custom components expose name/role/value; status messages via role=status (completion meter, applied-answers receipt)
AI-assistance features specifically	Supports	Assistant panel fully keyboard/screen-reader operable; AI-suggested values visibly and programmatically tagged until user-verified; complete non-AI path always available

Notes and commitments

1. Conformance carries to production via CI enforcement: automated accessibility gates block merge on any violation; manual assistive-technology testing each release.
2. All contract deliverables (documents, guides, reports) will conform to HHS ICT accessibility standards.
3. ACR/VPAT updated and delivered with Beta and again at Final Release, with a remediation plan for any nonconformity then identified (PRS#14 thresholds).
4. Legal disclaimer: This document describes the accessibility conformance of the named prototype as evaluated on the date shown, using the testing methods described herein. It is provided for evaluation purposes and does not constitute a legally binding warranty; conformance of the delivered production system will be documented in the draft ACR at Beta and the final ACR at Final Release per PRS#14.
