

HHS Section 508 Accessibility Conformance Checklist

RFQ 75D301-26-Q-00146 — Modernized Application for Consumer and Healthcare Provider VAERS Reporting Offeror: Frasier Digital, LLC · UEI PY8MJ4JPHJ45 · CAGE 213L8 Submitted per HHSAR 352.239-78(b)/(d) and Amendment 0001 Q&A 187, 239, and 256: this checklist describes the proposed development approach and planned conformance for a custom application that does not yet exist; the full ACR/VPAT is delivered in draft with the Beta Release and updated at Final Release (PWS Section 8; Q&A 23). Our prototype's Accessibility Conformance Report is attached separately as present-tense evidence of the practices claimed here.

1. Product and standards

ICT item	Custom responsive web application (public + healthcare-provider VAERS reporting), including branching form, document upload, FAQ/help, satisfaction surveys, and the administrative configuration interface
Applicable standards	Revised Section 508 Standards (36 CFR Part 1194, incorporating WCAG 2.0 Level A and AA); HHS Section 508 policy
Conformance target	WCAG 2.0 A/AA — full conformance for all end-user-facing interfaces and the administrative interface; WCAG 2.1 AA used as the working target in CI (a superset of the requirement)
Evaluation methods planned	Automated scanning in CI on every commit (axe-core ruleset); manual keyboard-only walkthroughs of every task flow; manual assistive-technology testing (NVDA + Chrome, VoiceOver + Safari, TalkBack + Chrome on Android) at each release gate — manual AT testing per Q&A 23; color-contrast verification at design time; 508 review as an acceptance criterion on every user-story

2. Conformance approach by criterion group (WCAG 2.0 A/AA)

Criterion group	Planned conformance	How it is engineered, not inspected-in
1.1 Text alternatives	Supports	Alt text required props on image components; decorative images marked presentational; upload previews carry descriptive labels
1.2 Time-based media	Supports	No audio/video planned; any instructional media added will carry captions and transcripts
1.3 Adaptable structure	Supports	Semantic HTML landmarks; form fields programmatically associated with labels and instructions; branching sections announced via aria-live; reading order equals DOM order
1.4 Distinguishable	Supports	Token-based palette with $\geq 4.5:1$ text contrast enforced at the design-system level; no color-only meaning; text resizable to 200 % without loss; no images of text
2.1 Keyboard	Supports	Every interactive element reachable and operable by keyboard; no traps; custom widgets follow WAI-ARIA Authoring Practices; tested in CI with keyboard-simulation tests

Criterion group	Planned conformance	How it is engineered, not inspected-in
2.2 Enough time	Supports	Session timeout warnings with extension; autosave of in-progress reports so a timeout never destroys a submission (also a PWS abandonment-reduction measure)
2.3 Seizures	Supports	Nothing flashes more than three times per second
2.4 Navigable	Supports	Skip links; unique page titles per step; visible focus indicator; descriptive headings and link text; breadcrumb/step indicator on the branching form
3.1 Readable	Supports	Language attributes set per page and per passage; English and Spanish parity (Amendment 0001 Q&A 270) with lang switching
3.2 Predictable	Supports	No context changes on focus/input; consistent navigation and identification; branching reveals fields without moving focus unexpectedly
3.3 Input assistance	Supports	Inline validation with error text tied to fields by aria-describedby; error summary with links; plain-language error copy; suggestions on format errors; confirmation step before submission
4.1 Compatible	Supports	Valid, parseable markup; name/role/value for all custom components; status messages via live regions

3. Functional performance criteria (36 CFR 1194, Appendix C, Chapter 3)

Use without vision, with limited vision, without perception of color, without hearing, with limited hearing, without speech, with limited manipulation, with limited reach and strength, and with limited language, cognitive, and learning abilities: **Supports (planned)** — carried by the criterion groups above plus plain-language content (PWS Task 1.6.1), the assisted-completion features, and mobile-responsive touch targets ≥ 44 px.

4. Support documentation and services (Chapter 6)

Product help, FAQ content, and user guides delivered under this contract will themselves conform to WCAG 2.0 A/AA and be available in accessible electronic formats; support channels documented in the application do not require vision or hearing to use.

5. Present-tense evidence

The evaluation prototype at <https://vaers-demo.frasierdigital.com> was built under these same practices and its automated audit results show **0 WCAG 2.1 AA violations across all tested states**; the attached Accessibility Conformance Report documents the methodology and results. Accessibility is an acceptance criterion in our definition of done (Volume I, Tabs 2-1 and 3-1), and the ACR/VPAT deliverable schedule (draft at Beta, final at Final Release, with remediation plan) is priced into CLIN 0001.
